1863.

THE PRESERVATION OF THE UNION,

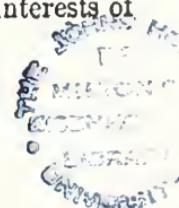

A

NATIONAL ECONOMIC NECESSITY.

FROM THE GERMAN COMMERCIAL GAZETTE

The present conflict between the North and South, having been discussed almost to exhaustion, from a political point of view, the task remained to present it from a national, economic and social point of view. This has been done in a most lucid and conclusive manner in a comprehensive circular, issued by one of the first commercial houses of New York, in which it is clearly demonstrated that *the Preservation of the Union is an indispensable necessity for the whole civilized world*. The very complete and valuable statistical tables which have been carefully collated from the last census report, together with an extract of the essential points from the circular itself, are herewith presented to the American reader. In view of the colossal productive and commercial power of the United States, every impartial mind must approve the prospective results of the present conflict as herewith presented. Separation of the Union is so completely shown to be synonymous with retrogression of general civilization, that at this enlightened period, no one can advocate such a retrograde movement without offending against all mankind. What right-thinking man can aid with his sympathy, much less by his direct support, in the destruction of this glorious whole, which has been created by the intelligent industry of several generations? Who would willingly lend a hand in closing up the inexhaustible sources of wealth which nature with unmatched liberality has lavished upon this truly great country?

Surely no truly enlightened person in either hemisphere could be guilty of so gross an outrage - against the best interests of mankind.

The above Tables present an interesting picture of the wealth and wonderful progress of this country. With an increase of population since 1850 of 25 per cent., or 8 millions, the value of property has increased in the same space of time 127 per cent., or 9,000 millions of dollars!—and with all this the above figures do not, by any means, give the real, entire value of the national property, for not only is the Government property and public domain not embraced therein, but the data are mainly obtained from the *Registers of direct Taxation*, in which the estimated valuations are always taken at the lowest amount of consideration for the tax-payers.

A people which, with its great extravagance in its expenditures, increases nevertheless the value of its property annually 900 millions of dollars, must not only have been prodigally endowed by nature with all the elements of wealth, but it must have developed, also, an uncommon degree of energy and intelligence in the utilization of the resources which its territory possesses.

Since 1850 the United States have increased their Banking Capital nearly 200 millions of dollars, and their Railroads 22,000 miles, at an expense of nearly 1,000 million dollars. The country has now over 32,000 miles of Railroads in active use, 30,000 miles of Water Communication, more or less artificial, and 40,000 miles of Telegraphic Lines!

The great variety in the means of support and acquisition of wealth is one of the especial advantages of this country; and the above Tables show what gigantic proportions its productive capacity has already attained in the various branches of Agriculture, Manufactures, Mining, &c., &c. Whilst the Western and Southern States show astonishing progress in Agriculture, the Northern and Eastern States have developed equally great progress in Manufactures. Foreign immigration brings to the whole country its invaluable advantages; the accumulation of capital in the Eastern States develops, in connection with the immense wealth of coal, minerals, and forests, constantly new and ever farther reaching industrial enterprises, and in these prodigious achievements the restless energy of the American brings to his aid the practical and inventive genius of the people in the shape of innumerable labor-saving machines and con-

trivances, without which, these immense triumphs over nature could never have been accomplished.

The Commercial power of the United States fully corresponds with these enormous resources. Great Britain has a more extended foreign commerce, because it imports nearly all the raw materials from foreign countries, and re-exports them as manufactured articles. Not so with the United States. This country contains *within its own territory* nearly all the raw materials in greatest abundance, and exports of these *only the surplus*, and imports only coffee, tea, sugar, and articles of luxury—and but few articles which it needs for its industry. The Commerce of United States may be seen from the above Tables, to which are added some which relate to the city of New York alone, *and which even now are on the increase*. But who can estimate with reference to the above Tables of production the magnitude of the *Internal Commerce between the several States*? Who can say *how much less this country would import, and how much more it would export*, if, in *European* fashion, the people would *economise* only a few years? Already has Europe been obliged to send here in 1861, the first year of the war, *more than 40 millions of dollars* to cover the balance of trade in our favor! And it may, perhaps, become as important for the great *money marts* of Europe, as for its manufacturing interests, that the Union should be restored as soon as possible to its normal condition.

The United States is truly the land—the very paradise of labor. Here is no place for idlers, be they rich or be they poor! Labor here makes all men equal; here the European noble and peasant work side by side! In no country on the face of the earth is labor more prized and honored, or better paid than here! Even *capital*, which in Europe controls labor, here becomes subordinate to and serves labor. It is the free and intelligent labor of the country that creates the Administration or the Government, that is, the Legislative, Executive, and Judicial powers of the country.

Whatever may be said against the doings and intrigues of the politicians, yet it is the highest honor of the system of government of the United States that *Free Labor*—that is to say, the equal right of all men to the pursuit of happiness—has been

recognized as the first natural and inalienable right ; and that this right has been consistently asserted in every direction ; and it is *the Union alone and above all* which protects this fundamental right against all possible assumption of power by single states, and which gives it *permanent and national guarantees*. The Union, therefore, represents the principles of *free Labor, free Intercourse, free River and Lake Navigation, free Schools, free Press, and free Religion*. The Union guarantees in its entire immense extent of 3,250,000 square miles (almost as large as all Europe), to all its present and future inhabitants *the most unlimited liberty of thought, commerce, and industry*.

Unquestionably it is mainly this great principle which has given to the Union its vast power and prosperity, and which cannot fail to secure to it a still more glorious future. Of what use would be to this country its rich and fertile lands, if the West were separated from the East, and the North from the South, by all sorts of inter-state restrictions and jealousies ; if the people were compelled to surrender regularly a large portion of its working population to standing armies ; or if it were restrained in the free exercise of its labor and industry by inter-state tariffs, or by a system of guilds, like that remnant of the middle ages in Europe ?

In the Old Country, where a different condition of things requires a different system of government, the people are proud, and very properly so, of the great progress which has been made there, in facilitating intercourse amongst the different peoples, in the abolition of river dues, guilds, the progress of free trade, and the emancipation of the serfs ; and yet all these achievements of modern times are but fragments of the great and general freedom of labor, which the Union guarantees for all time to come, to every citizen, native and adopted, as well as to the future immigrant.

Viewed from this stand-point, the attempt of the Rebels to destroy the Union, and to establish in its stead a Confederacy based upon Human Slavery as its corner stone, cannot be regarded as other than a crime against this Nineteenth Century, and as an attempt against all recognized human rights.

Can any one doubt as to the result of this conflict ? As well might we assume that England would re-enact its former system

7

of protective duties, its corn laws, and navigation act; that Germany would revive the old guilds, soccage service, and religious persecutions; that Russia would restore the just abolished serfdom. In fact, we might as well assume that civilization would retrograde, and that the great civilized nations of Europe would go back to the feudal system of the middle ages!

The great natural rights of man, that have their being in the Union, are more powerful by far than all the armies or intrigues of the enemies of the Union. The fortune of war has not much favored the North during the past year, and yet do we see that the idea of the Union has resumed entire sway again in the Slave Border States of Delaware, Maryland, Kentucky, Missouri, and a large portion of Virginia, and that even the question of the total abolition of slavery is assuming in those States the most forcible prominence.

Our country has always developed most actively after every commercial crisis, and it will surely emerge from the present political crisis with regenerated and greater power.
